Parade was presented by Gimbel's in Philadelphia, Pennsylvania, November 25, 1920. Aretha Franklin, the "Queen of Soul," was the first woman inducted in Rock and Roll Hall of Fame."

Throughout history, much of human progress has been driven by the need to be the first or even the only person to accomplish something. In "First/Only," an unique collection of interesting facts, author Nedson W. Campbell has compiled a reference to some of the most significant and groundbreaking events in human history. From Cain, the first person ever to commit a murder, to BOX-USA, the only interactive music video station, Campbell provides a plethora of remarkable bits of information that may help you start a conversation or spark a debate.

Mac OS X Panther Hacks-

Rael Dornfest 2004 Like the animal it's named for, Mac OS X Panther is beautiful, sleek, superbly efficient, dangerously alluring, and all muscle under the surface. Beneath its appealing interface, it's a hard-working machine. Those coming to Mac OS X from previous incarnations of the operating system recognize much of the friendly face of the Macintosh they're used to, but they're also plunged into a whole new world. Unix converts to Mac OS X find a familiar FreeBSD-like operating system at the core and many of the command-line applications that they're familiar with: it's like an open invitation to roll up their sleeves and hack. Mac OS X Panther Hacks brings together the perfect combination of tips, tricks, and tools to help serious Mac users--regardless of their background--get the most from their machines. This

revised collection reflects the real-world know how of those well-steeped in Unix history and expertise, sharing their no-nonsense, sometimes quick-and-dirty solutions to administering and taking full advantage of everything a Unix desktop has to offer: Web, Mail, and FTP serving, security services, SSH, Perl and shell scripting, compiling, configuring, scheduling, networking, and hacking. Add to that the experience of die-hard Macintosh users, customizing and modifying their hardware and software to meet their needs. The end result is cool stuff no power user should be without. The hacks in the book range from the quick and easy to the more complex. Each can be read easily in a few minutes, saving countless hours of searching for the right answer. Mac OS X Panther Hacks provides direct, hands-on solutions in topics such as: User Interface Accessories (iPod, USB devices, mobile phones, PDAs, etc.) Wired and wireless networking (Ethernet, WiFi, Bluetooth, etc.) Email (servers and clients) Web (servers and clients) Messaging (iChat and

associated apps) Printing and Faxing (sharing printers, fax server, etc.) Multimedia If you want more than your average Mac user--you want to explore and experiment, unearth shortcuts, create useful tools, and come up with fun things to try on your own--this book will set you on the right track. Written for users who need to go beyond what's covered in conventional manuals--Mac OS X Panther Hacks will bring your Mac to its full potential.

parents' turbulent divorce

The Rendezvous and Other Stories-

Daphne Du Maurier 1980 A collection of short stories from one of Britain's most celebrated novelists of our time. The short stories which Daphne du Maurier has written throughout her career have always had a haunting quality, and from two of them - The Birds and Don't Look Now - memorable films have been made. The fourteen tales included in the present volume were written over a period of many years some of them before her first novels were published, others in her thirties and forties; they reflect many human emotions: romance, disenchantment, fantasy, nostalgia, ambition, irony, the longing for adventure. Each story is based on something du Maurier observed or overheard and will provide pleasure for every mood.

Practical Applications of Computational Intelligence for Adaptive Control-

Charles Karr 1999-04-12
Written as a result of a seven year research project using computational intelligence techniques for solving mineral processing problems at the U.S. Bureau of Mines, this book is about intelligent, adaptive process control. It brings together ideas from the field of computational intelligence , a part of the larger field of artificial intelligence, including fuzzy mathematics, genetic algorithms, and neural networks and uses these ideas to develop a generic architecture for accomplishing adaptive process control. In the development of this architecture, the requisite tools are described and then demonstrated on a number of problems. Moreover, most of the examples are of interest in industrial settings (although some simple examples are provided in the beginning so that the reader can focus on technique and not be

overburdened with the complexity of the problems being solved.) The focus of Practical Applications of Computational Intelligence for Adaptive Control is on practical applications. It provides practicing engineers and scientists with the information they need to solve process control problems in industry and academia. If the reader is interested in solving difficult control problems or interested in the mechanics of basic computational intelligence techniques, then this book is an excellent place to start.

Banished-F. David Stevenson 2002 Banished is a farcical black comedy based upon further erosion of civil rights in the future. It takes place during a recession in a newly formed country called the Lands after the fall of the United States. Governments and powerful civic leaders try to solve financial insolvency by collecting past due fines from dubiously convicted drunk drivers in a draconian manner, establishing a work camp in an inhospitable part of another Land for those who

*November 29, 2021 by
guest*

do not pay. The camp is an almost perfect place to hide prisoners and staff who have information or skills that might be damaging to the elite. The ex-offender chief of staff at the camp is appointed to hide him because he has damaging information in a massive civil case against the Parish of St. James. His brutality causes the death of a prisoner. The efforts to cover up the tragedy lead to overreaction, and further fatal mistakes. In the end, the abused prisoners are granted their freedom if they accept banishment, allowing the politicians and powerful of St. James to wash their hands of the debacle.

ADA in Distributed Real-time Systems-Kjell Nielsen

1990 A software first real time design methodology to determine a suitable process abstraction of the concurrent system elements, create a set of virtual nodes that encapsulate Ada tasks, determine inter-node communication, select a set of distributed processors to support the virtual nodes, distribute the virtual nodes

among the selected processors are featured.

Paperbound Books in Print-1975

Other People-Peter Campion
2005-10 Poem to Fire Fast
transparency that explodes the fuel and air in the cylinder and shuts the intake valves and thrusts down on the piston so the crankshaft spins and spins you cut through all material that blocks your way so fast that driving now past rushes and billboards this pull to her could be your own impersonal presence cloaked in the day to day of the malls and condos all those wired sensors keeping on guard for you except you flicker even inside the wet wall where papillary muscle makes that sweet pulsation in whatever room she's moving through this moment under the cotton and the cool smoothness tinted blue In this debut collection, Peter Campion explores both the gaps and the connections between the self and others. Like the "night blooming jasmine leaving its warm trace," these

poems arise out of the dark. A man awakens in a hotel room to find the neighboring voices merging with the anguished souls of his nightmare. A woman living alone beside the ocean hears the words of the dead echo in the crashing waves. But if these poems convey a feeling of an enduring emptiness, they also offer us the most vital intimacies. In one poem, two lovers traverse the industrial sweep of strip malls and office towers to arrive at their rendezvous. In another, the seemingly simple memory of a mother playing with her sons at a park bridges a chasm of pain and loss. With great poise, keen insight, and formal skill, Campion moves between shared experience and interior life in the shifting textures of *Other People*. Whether writing in rhymed couplets or free verse, he

matches a deep understanding of the poetic tradition with his own imaginative feel for structure. "The 'other people' of the title of this extraordinary book are fully alive in the life of its language; and so is the poet observing them, and observing himself, as one of them. The book is a sympathetic and unsentimental instrument of truth."—David Ferry

The Ark Sakura—Kōbō Abe
1988 An underground quarry is converted into a huge nuclear shelter called an "ark" by its creator, a half-mad inventor who calls himself Mole, who begins to recruit passengers
